

SUMMARY

Product designer and engineer who owns the whole thing — the look, the build, and the ship. I make interfaces that feel calm and obvious, backed by code that holds up in production, and I take products from blank page to live deploy on my own.

SELECTED WORK

Blueprint — Field-service platform

Designer + Engineer · solo

A complete operations platform for a grocery-construction business — designed and built end-to-end.

- Nine product modules: ranked Kanban board, analytics dashboards, full double-entry accounting (Books), quote builder with branded PDFs, live warehouse prospecting, WASM Monte-Carlo forecasting, and a per-store job-cost cockpit.
- Token-driven design system with light/dark theming and a WCAG contrast check enforced in CI; ⌘K command palette, view transitions, and full keyboard reach on every surface.
- SvelteKit 2 / Svelte 5 + TypeScript on the front, MongoDB on the back, Dockerized to Azure Container Apps via GitHub Actions; 560+ automated tests with Playwright e2e.
- Native SwiftUI iOS companion with offline edits, drag & drop, and a fastlane → TestFlight pipeline.
- Applied AI: email and receipt parsing onto cards, bank-line categorization, and month-end narratives — model proposes, human confirms.
- Hand-authored WebAssembly for hot compute — a genuine ~2× over the JavaScript twin.

Interface Explorations

Design R&D

A dozen full reskins of the same app — range studies on motion, depth, type, and platform CSS.

- Glassmorphism, neobrutalism, retro-synthwave, maximalism, neumorphism, native-platform CSS, an interactive WebGL globe, and spatial 3D — each the entire app on the same real data.
- Every exploration is Svelte-scoped so it never touches the production design system or its contrast gate.

SKILLS

Design

Design systems Tokens Accessibility / WCAG Motion Prototyping

Engineering

SvelteKit Svelte 5 TypeScript Node MongoDB SwiftUI WebAssembly

Platform

Docker Azure GitHub Actions Playwright Chart.js

Applied AI

LLM extraction Vision OCR Human-in-the-loop

HIGHLIGHTS

- Design → deploy, solo
- Web & native iOS
- A dozen UI explorations
- 560+ automated tests
- WCAG contrast gate in CI

FOCUS

Field-service & operations SaaS — design-led products with real depth: accounting, forecasting, and field workflows.
